I had this as a plus about the list of Roles in previous wireframes.. would like to test to see where people would click..

2 Role Description

This should be editable by the Role's creator.. with a nudge to use layman's terms + keep it short..

3 Accordion

These can be expanded on default, but for Roles that have 100s, like System Admin, there should just be an expandable snapshot of the Permissions

4 Reordering Roles List

Drag + drop I think would be ideal.. This can mimic the Q-Builder behavior via auto-collapsing upon dragging + "Move to Bottom//Top"

Participant Types

- Learner
- Operator
- Faculty
- Observer
- **Patient**

- 1 Roles List
 - These can be dragged around and reordered as needed
- 2 Roles Mapped to Participant Types
 Directly across from each Role listed is its
 associated Participant Type
- 3 Little Scroll Box

This will be bigger on screen, but we can decide to give the users a choice to collapse the Participant Types list

4 Participant Types

These can be dragged and dropped from their list into a new Role being created
